

## Creative Mounting Solutions

If saving money on the up-front costs is important or if circumstances just dictate a custom mounting solution, here a few creative solutions our customers have found:

- **Upper left** – A standard roof/wall trimast is attached to the back bumper of the trailer.
- **Upper right** – The trimast is mounted on the roof of the RV.
- **Lower left** – This is another home-grown rooftop mount that uses a trimast. This one has a bigger dish.
- **Lower right** – Again, a trimast is used. This time it is mounted to a big-rig cab.

Using a trimast instead of a tripod and offset adapter can save on the total equipment costs.
