

First of all, please check out our “good-bye to StarBand page”:

<http://www.mobileinternetsatellite.com/>

Then, just click “HOME” to enter the site, which has been updated with information about the new HughesNet service we will begin offering soon.

Things are still on hold while all the “t”s get crossed ... Not much besides the web site update happened this week, but hopefully we will soon have our system.

I’ll let you know when we get our system. Once we have it, we can begin learning what is different about the new Jupiter system and creating our documentation for it.

We will have to travel to visit a friend in Prescott Valley, in order to test the Spaceway system and learn about it. It’s a lower priority, because it is going away next year.

Please check the services page and the map shown there to determine if you MIGHT need the older Spaceway system AND you would want to get it and upgrade next year! Or, if you would likely just wait until the Jupiter coverage is available everywhere you want it.

If no one plans to get a Spaceway system, we may just skip learning about that system entirely. So let me know, please! It will save us a lot of time, energy and expense.

Check out the new info, primarily in the Equipment & Service menu, but all over the site there are some changes.

Let me know if you have any questions and/or corrections to note.

And, please let us know when you plan to get a HughesNet system, so we can start planning for that.

We hope to be ready for Tucson installs and training in early October at the latest and remote installs a month or so after that.

*Take care,*

*Barb*
