

Happy New Year Everyone!

New HughesNet Mobile App!

HughesNet has a new HughesNet Mobile app! The free app allows you to monitor your data usage, buy tokens, check your Wi-Fi strength, and more. With HughesNet Mobile, you will have account management access at your fingertips, including convenient payment and low-data alerts.

Search for HughesNet Mobile in your mobile device's app store. For additional information, check out some frequently asked questions [here](#).

Beyond Ka - Supporting Future Telecommunications

With the surge of current and future Ka-band capacity, you would be forgiven for thinking that bandwidth would not be a pressing issue. However, initiatives are already underway to explore the feasibility of expansion into new bands, namely Q and V. But what kind of appetite does the industry have for this expansion and what potential do these bands hold?

Read the [article](#) in ViaSatellite for more details.

MobileInternetSatellite.com Blog

Finally, I wanted to let you know that a blog has been added to the MobileInternetSatellite.com web site. Since the old blog was actually hosted by Google's blogger.com, I wanted to repost some old blogs, starting with a series of posts that document the history of mobile satellite Internet.

Just go to: <http://www.mobileinternetsatellite.com/blogs>

*Take care,
Barb Nolley*
