Subject: Successful Completion of In-orbit Testing and Handover of EchoStar XIX from Space Systems Loral (SSL)

Hughes accepting handover of EchoStar XIX from SSL marks the beginning of the final testing phase in preparation for HughesNet® Gen 5 services.

Echostar XIX is really in the home stretch now! Designed with Hughes JUPITER™ System technology, EchoStar XIX will power HughesNet Gen5, the next generation of high-speed satellite Internet service in the U.S., delivering more speed, more data, and more advanced features to consumers and small businesses coast-to-coast.

Click [here](#) to read the full press release.

I'll be sending more details about the new Gen5 launch date, upgrade information for current customers and hopefully more information about equipment costs, after another webinar from Hughes, later this week.

Take care,

Barb
